3.

I am very new to programming and just starting to learn JavaScript. So far, I have learned the basics like how to create variables, write simple functions, and use if-else conditions and loops. I'm also starting to understand how JavaScript works in web pages, like how it can make things appear or change when a user clicks a button. I still have a lot to learn, especially about how to handle user input and how JavaScript works with HTML and CSS.

For this unit, I aim for a **Distinction**. Even though I'm a beginner, I am motivated to learn and will put in my best effort to understand the concepts and complete all tasks carefully.
